The lift compartment "Project Classic" is a pre-painted steel structure with a high degree of modularity consisting of structural steel with special section and glazed or blind paneling. The structure integrates all the arrangements for setting up elevators installations of the electric or hydraulic type and is fitted with adjustable components in the installation phase. The total absence of exposed bolting gives the structure a very sleek and smooth appearance. The closing panels installed flush with the external surfaces facilitate the flow of rainwater ensuring greater durability and cleaner machine. The painting treatments for indoor or outdoor made with industrial procedures ensure extreme durability and high aesthetic.

INSTALLATION IN THE STAIRWELL:

The buildings that have spaces of sufficient size in the stairwell may provide for the possibility of the installation inside it. Where originally there are no sufficient minimum spaces it may be possible to obtain the area by reducing the width of the stairs to the minimum allowed. The realization of a smooth lift or compliant with the directives for use by people with limited mobility is widely guaranteed

OUTDOOR INSTALLATION IN PROXIMITY TO A WALL:

In the buildings in which you can place the exit areas near outer walls, the exterior installation of the lift shaft may be provided. The realization of a smooth lift or compliant with the directives for use by people with limited mobility is still guaranteed.

OUTDOOR INSTALLATION IN PROXIMITY OF A WALL WITH EXIT GANGWAYS:

The buildings that do not have sufficiently large exit areas may provide for the possibility of the realization of external lift shafts with gangways directly connected to the building. The realization of a smooth lift or compliant with the directives for use by people with limited mobility is still guaranteed, even if appropriate exit areas are not originally available.

**OUTDOOR INSTALLATION IN PROXIMITY OF A WALL WITH INTEGRATED EXIT GANGWAYS:**

The buildings that do not have sufficiently large exit areas may provide for the possibility of the realization of external lift shafts with integrated Gangways directly connected to the building. Additional walkways are completely closed and may provide for the integration of doors and windows that can be opened to ensure a high level of comfort while maintaining the original characteristics of lighting and ventilation of the premises to which they are connected. The realization of a smooth lift or compliant with the directives for use by people with limited mobility is still guaranteed, even if appropriate exit areas are not originally available

- 1 Heavy duty beam with or without eyebolts. Repositionable during installation
- 2 Horizontal profile to support heavy loads. Variable dimensions according to the loads
- 3 Internal cable routing to the vertical profiles. Inspectable with protective casing removal
- 4 Horizontal profile with continuous predisposition for fixing guide support brackets. Repositionable during installation
- 5 Vertical profiles with concealed joints. Variable dimensions according to the structural characteristics
- 6 Base frame with plug-in joints. Can be installed by fixing with dowels or masonry
- 7 Roof for indoor or outdoor installations.
- 8 Stabilization frame with cross. Also made in 2 parts to facilitate shipping and installation
- 9 Glass infill or sandwich panel. Installable from inside, interchangeable even during installation
- 10 Generic horizontal profile. Repositionable during installation
- 11 Horizontal profile with provision for fixing landing doors. Repositionable and adjustable during installation
- 12 Door side compensating profile. Made to measure and adjustable during installation

The lift compartment "Project Home" is a pre-painted steel structure with a high degree of modularity, mainly used for the installation of lifts platforms. It consists of structural steel with special section and glazed or blind paneling. The structure ensures the flatness of the internal surfaces to allow also the installation of structures without cabin walls and provides for the secured internal passage of all electrical connections. It is also equipped with adjustable components during installation to allow possible adjustments in the set up. The painting treatments for indoor or outdoor made with industrial procedures ensure extreme durability and high aesthetic.

**INSTALLATION IN THE STAIRWELL:**

The buildings that have spaces of sufficient size in the stairwell may provide for the possibility of the installation inside it. Where originally there are no sufficient minimum spaces it may be possible to obtain the area by reducing the width of the stairs to the minimum allowed. The realization of a smooth lift or compliant with the directives for use by people with limited mobility is widely guaranteed.

OUTDOOR INSTALLATION IN PROXIMITY TO A WALL:

In the buildings in which you can place the exit areas near outer walls, the exterior installation of the lift shaft may be provided. The realization of a smooth lift or compliant with the directives for use by people with limited mobility is still guaranteed.

**OUTDOOR INSTALLATION IN PROXIMITY OF A WALL WITH EXIT GANGWAYS:**

The buildings that do not have sufficiently large exit areas may provide for the possibility of the realization of external compartments with Gangways directly connected to the building. The realization of a smooth lift or compliant with the directives for use by people with limited mobility is still guaranteed, even if appropriate exit areas are not originally available.

**OUTDOOR INSTALLATION IN PROXIMITY OF A WALL WITH INTEGRATED EXIT GANGWAYS:**

The buildings that do not have sufficiently large exit areas may provide for the possibility of the realization of external compartments with integrated Gangways directly connected to the building. Additional walkways are completely closed and may provide for the integration of doors and windows that can be opened to ensure a high level of comfort while maintaining the original characteristics of lighting and ventilation of the premises to which they are connected. The realization of a smooth lift or compliant with the directives for use by people with limited mobility is still guaranteed, even if appropriate exit areas are not originally available.

- 1 Heavy-duty beam with or without eyebolts. Repositionable during installation
- 2 Horizontal profile for supporting heavy loads. Variable dimensions depending on the loads
- 3 Internal cable passage to the horizontal and vertical profiles. Can be inspected with protection cover removed
- 4 Horizontal profile with continuous preparation for fixing guide support brackets. Repositionable during installation
- 5 Vertical profiles with hidden joints. Complete with internal closing casing
- 6 Base frame with integrated pit and coupling joints. Installable by fixing with plugs
- 7 Roof for indoor or outdoor installations. Made in 2 parts, with drip profile
- 8 Stabilization frame with cross. Also made in 2 parts to facilitate shipping and installation
- 9 Glass infill or sandwich panel. Installable from inside, interchangeable even during installation
- 10 Generic horizontal profile. Repositionable during installation
- 11 Horizontal profile with provision for fixing manual or automatic doors. Repositionable and adjustable during installation
- 12 Door side compensator profile. Made to measure

The lift compartment "Project Extra Slim" is a pre-painted steel structure with a high degree of modularity that allows installation in extremely small spaces and it consists of frames and linear profile shapes with special section and glazed or blind paneling. The structure integrates all the arrangements for setting up elevators installations of the electric or hydraulic type and is fitted with adjustable components in the installation phase to allow possible adjustments in the set up. The total absence of exposed bolting gives the structure a very sleek and smooth appearance. The closing panels installed flush with the external surfaces facilitate the flow of rainwater ensuring greater durability and cleaner machine. The painting treatments for indoor or outdoor made with industrial procedures ensure extreme durability and high aesthetic.

This type of structure is used mainly for locations where spaces are extremely small and it allows installations where it was impossible to put a lift facility until now. The realization of a smooth and suitable lift facility for use by people with limited mobility is widely guaranteed.

- 1 Horizontal frames with continuous predisposition on 3 sides for fixing guide support brackets. With variable section
- 2 Vertical profiles with hidden joints. Variable dimensions depending on the structural characteristics
- 3 Base frame with integrated pit and coupling joints. Installable by fixing with plugs
- 4 Roof for indoor or outdoor installations. Made in 2 parts, with drip profile
- 5 Stabilization frame with cross. Also made in 2 parts to facilitate shipping and installation
- 6 Glass or sandwich panel infill. Installable from the inside, also interchangeable during installation
- 7 Generic horizontal profile. Repositionable during installation
- 8 Horizontal profile with provision for fixing landing doors. Repositionable and adjustable during installation

The lift compartment "Project Elegance" is a pre-painted steel structure with a high degree of modularity, consisting of profile shapes with special section and externally coated with glass paneling interposed between profile shapes with small section. The structure integrates all the arrangements for setting up elevators installations of the electric or hydraulic type and is fitted with adjustable components in the installation phase to allow possible adjustments in the set up without compromising the quality standards. The total absence of exposed bolting gives the structure a very sleek and smooth appearance. The painting treatments for indoor or outdoor made with industrial procedures ensure extreme durability and high aesthetic.

The large quantity of glazed surface gives the structure a modern and elegant look that is well suited to the use in prestigious places, helping to enhance the environment.

- 1 Heavy-duty beam with or without eyebolts. Repositionable during installation
- 2 Horizontal profile for supporting heavy loads. Variable dimensions depending on the loads
- 3 Internal cable routing to the vertical profiles. Inspectable with protective casing removal
- 4 Horizontal profile with continuous predisposition for fixing guide support brackets. Repositionable during installation

The lift compartment "Project Vision" is a pre-painted steel structure with a high degree of modularity, consisting of profile shapes with special section and externally coated with glass paneling fixed with points. The structure integrates all the arrangements for setting up elevators installations of the electric or hydraulic type and is fitted with adjustable components in the installation phase to allow possible adjustments in the set up without compromising the quality standards. The total absence of exposed bolting gives the structure a very sleek and smooth appearance. The painting treatments for indoor or outdoor made with industrial procedures ensure extreme durability and high aesthetic.. The entire external glass coating, together with the stainless steel mounting studs, give the structure a prestigious look that ensures the greatest possible transparency.

- 1 Heavy-duty beam with or without eyebolts. Repositionable during installation
- 2 Horizontal profile for supporting heavy loads. Variable dimensions depending on the loads
- 3 Internal cable passage to the vertical profiles. Can be inspected with protection cover removed
- 4 Horizontal profile with continuous preparation for fixing guide support brackets. Repositionable during installation

The lift compartment "Project Round" is a pre-painted steel structure with a high degree of modularity characterized by a cylindrical shape which can be buffered with glazed panels. The structure integrates all the arrangements for setting up elevators installations of the electric or hydraulic type, of rectangular or cylindrical shape, and is fitted with adjustable components in the installation phase. The rounded shapes and the total absence of exposed bolting give the structure a look of great architectural value. The painting treatments for indoor or outdoor made with industrial procedures ensure extreme durability and high aesthetic. The cylindrical shape and curved glass coating give the structure a unique appearance that provides maximum enhancement of the environment in which it is placed.

- 1 Horizontal profile with continuous preparation for fixing guide support brackets. Repositionable during installation
- 2 Vertical profiles with hidden joints. Variable dimensions depending on the structural characteristics
- 3 Base frame with plug-in joints. Can be installed by fixing with dowels or masonry
- 4 Roof for indoor or outdoor installations. Also made in 2 parts to facilitate shipping and installation
- 5 Stabilization frame. Also made in 2 parts to facilitate shipping and installation
- 6 Glass infill. Installable from the inside
- 7 Generic horizontal profile. Repositionable during installation
- 8 Horizontal profile with provision for fixing landing doors. Repositionable and adjustable during installation

COLORS

SPECIAL COLORS

This page contains the recommended colors, however **the entire RAL palette is available**, subject to availability.

The recommended coatings are of the opaque type and have an embossed finish that guarantees invisibility of the prints and better durability to wear.

The 1:1 scale photographic images have been made with the utmost accuracy, however, it is not possible to obtain a totally faithful representation and are therefore to be considered as indicative.

Painting for indoor installations: Application of powder paint with a minimum thickness of 80 microns applied by an automated system. Curing in the oven at 180 ° for 20 minutes.

Painting for outdoor installations: anti-corrosion treatment of cataphoresis (by electrolytic immersion) and surface finishing by applying powder paint with a minimum thickness of 80 microns applied by an automated system with polymerization at 180 ° for 30 minutes.

Special execution with integrated LED strip. The LED strips are integrated inside the vertical profiles and can be installed on all sides and for all the height of the elevator shaft. It is possible to install up to 8 LED strips (2 on each side) for indoor or outdoor use and use all the intrinsic features of this type of lighting to obtain functional and / or scenographic lighting to enhance the architectural features of the installation.

The packaging includes wooden boxes suitable for road or sea transport.
The supply includes box for the complete structure of accessories and box for infills.

Box for structure:

- Complete Structure
- Screws
- Accessories for Plugging
- Installation manual
- Technical drawings
- Plugging diagram
- Dedicated calculation report compliant with Eurocodes (UNI EN 1990/1998)
- CE Marking Certificate in accordance with UNI EN 1090

Box for infills:

- Glass or sandwich panel infills

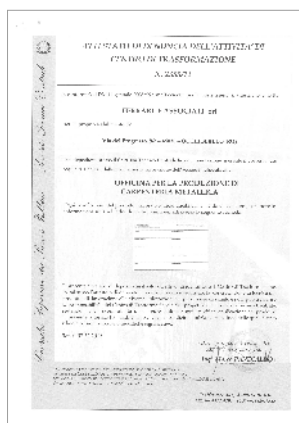

CERTIFICATION

Quality requirements for welding EN ISO 3834-2: 2005

Quality management system EN ISO 9001: 2015

Certificate of processing center No. 2355/12

CE Certificate of conformity for CE marking of the UNI EN 1090 structures
